

Dear Valued Customer:

As we're amid the Fluzone High Dose® Quadrivalent (Influenza Vaccine) shipping season, we want to thank you for your continued partnership and business and send you a reminder regarding packaging and proper administration of Fluzone High Dose.

Every box of Fluzone High Dose Quadrivalent vaccine contains 10 syringes. However, 10 syringes may be packaged in one of two different ways:

- As 10 individually separated syringes; or
- In 5 sleeves, with each sleeve containing 2 syringes.

The vaccine is administered as a single dose from 1 single prefilled syringe, 0.7 mL, given intramuscularly. ***Even when these syringes are packaged in a 2-syringe sleeve, only 1 syringe should be administered to a patient.***

To ensure proper administration of Fluzone High Dose Quadrivalent vaccine, please communicate the following correct dosing to all administrators:

- Fluzone High Dose® (Influenza Vaccine) is administered as a single dose from one single prefilled syringe, 0.7 mL, given intramuscularly.

Please call your sales representative or **1-800-VACCINE** (1-800-822-2463) with any questions or concerns and thank you again for your continued business.

For your reference, our different packaging types are included below.
