

YOUR CHILD MAY NEED 2 DOSES OF FLU VACCINE

If your child is between 6 months and 8 years of age, and is getting their first flu vaccination or has previously gotten only one dose of vaccine,

**THEY NEED 2 DOSES
OF FLU VACCINE**

HERE'S WHY

- The first dose “primes” the body—the second dose protects it*
- In a study that spanned from 2014-2015 through 2017-2018 flu seasons, children 6 months to 8 years of age who received 2 doses of the flu vaccine were better protected than those who had not been fully vaccinated**

* Vaccination with flu vaccine may not protect all recipients.
** Study included 7,533 children 6 months to 8 years of age.

**NEXT
STEP**

**IF 2 DOSES ARE NEEDED,
SCHEDULE AN APPOINTMENT
4 OR MORE WEEKS AFTER THE FIRST DOSE**

NEXT APPOINTMENT: Date: _____ Time: _____
