

# FLU IMMUNIZATION EVALUATION TABLE

Use this chart to help measure trends in flu vaccinations, season after season.  
Measure your successes and identify new goals based on your assessments.

Metric	Previous Season (Actual)	This Season (Target)	This Season (Actual)
<b>Total Number of Patients by Age Range (out of your total patient population)</b>			
65+ years			
50-64 years			
18-49 years			
6 months - <18 years			
<b>Total Number of Flu Vaccines Reserved</b>			
<b>Total Number of Patients Immunized by Age Range (out of your total patient population)</b>			
65+ years			
50-64 years			
18-49 years			
6 months - <18 years			
<b>Total Number of Flu Vaccines Leftover</b>			

## HOW TO COUNT VACCINES THAT WERE ADMINISTERED OUTSIDE OF THE PRACTICE:

1. Ask immunizers what reasons patients cited if they did not wish to receive their flu vaccination in your practice.
2. If they received the vaccine elsewhere, document which vaccine they were given.
3. Based on these patient characteristics, reach out to these patients earlier during the next flu season, so they can receive the vaccine in your practice.
